

PRODUCT SUMMARY

PREPARATION & CLEANING

Power Cleaner: is a highly concentrated, commercial strength cleaner, degreaser, and wax remover for commercial and industrial use. Power Cleaner has been formulated with a distinct blend of water softening agents and nonionic surfactants that allow you to clean and dissolve the toughest grease /oil stains from almost any surface, including concrete. Power Cleaner works by penetrating, suspending, emulsifying, and dissolving surface contaminants. This remarkable product is so versatile it can be used to clean everything from degreasing the dirtiest substrate to removing oil stains and/or wax from commercial and industrial surfaces.

Nu-Lift Cleaner: is formulated with an environmentally-responsible mineral acid that is user friendly. Nu-Lift Cleaner does exactly what its name implies it lifts out and removes alkalinity, efflorescence, hard water deposits, magnesium, dirt and stains from surfaces like grout and natural stone without harming or discoloring.

Stone Soap: is a highly concentrated, heavy duty cleaner formulated for cleaning without harming finished surfaces. Stone Soap is a 100% biodegradable product. Stone Soap is a user friendly, environmentally-responsible product that is excellent for cleaning any surface.

WATER PROOF OVERLAYMENT SYSTEM

X-Bond & ColorBond: is a waterproof, lightweight, cementitious product that virtually resurfaces any surface. The X-Bond system offers the ultimate in durable, environmentally responsible creative design capability. This superior bonding system adheres directly to any existing surface. X-Bond can be safely applied in confined areas over existing surfaces minimizing waste disposal. Unlimited texture possibilities allow for complete creative freedom. This durable, waterproof system is designed for both interior, exterior and below grade use.

WATER BASED CONCRETE STAIN

Pre-Stain Base & Pre-Stain: Color is a water-based chemical bonding compound that provides rich, lasting color on exterior, interior and below grade concrete & X-BOND surfaces. This Environmentally-Responsible system creates lasting surface colors. Unique color reactions provide unlimited, vivid, one-of-a-kind visual designs. Artistry and practicality combine to create beautiful and functional applications.

SEALERS

X-Crete 400: is formulated with the latest technology in polyurethane blend resin to provide the most environmentally-responsible, water-based sealer available in today's market. X-Crete 400 is a high quality, multi-faceted product. It dries clear, creating a shiny look as it simultaneously seals, dust proofs, and protects. X-Crete 400 is a unique, one-of-a-kind high-gloss topcoat, which provides a durable barrier resistant to stains and chemicals while providing a polished look for exterior and interior use.

X-Crete 500: is an exceptional waterproofing sealer that excels under the most demanding circumstances. X-Crete 500's low molecular weight allows for excellent penetration. X-Crete 500 fills into the pores of the substrate, in which chemical reaction follows, that creates a solid, but breathable membrane. X-Crete 500 provides long lasting protection for a vast array of surfaces in which it leaves a natural finish.

Xtra Gloss: is a one-part solvent-based polyurethane sealer, able to provide exceptional durability and shine for interior, exterior, and below grade use. Xtra Gloss is a high quality, multi-faceted product: which dries clear, creating a wet look, as it simultaneously seals, dustproofs, and protects for long lasting durability. Xtra Gloss is a unique, high-gloss top coat which provides superior and durable resistance to stains, many chemicals and vehicle traffic.

Xcel: is an exceptional waterproofing sealer designed for specifically for natural stone. Xcel's low molecular weight allows for excellent penetration. Xcel fills into the pores of the substrate, in which the chemical reaction that follows creates a solid, but breathable membrane. Xcel provides long lasting protection for a vast array of surfaces over which it leaves a natural finish.

POOL DECK COLORANT/SEALER

Colour Coat: is an Environmentally-Responsible product, formulated with the latest water-based technologies. Colour Coat is a topical polyurethane product, which is designed to withstand heavy foot traffic, while maintaining a gloss or matte finish. With its temperature reducing properties, up to 25 degrees Fahrenheit, it is optimal for pool decks and other barefoot surfaces. Colour Coat is a colorant, sealer, primer and hardener all-in-one.

MAINTENANCE TOP COAT

Crystal Coat: is formulated with the latest water-based technology in latex polymers, and is able to link to most top coats. Crystal Coat provides a quick drying, environmentally-responsible, durability and shine, for interior and exterior use. Crystal Coat is a quality, multi-faceted product which dries clear creating a deep gloss finish, as it simultaneously seals and protects. Crystal Coat provides a durable barrier, resistant to stains and high foot traffic.

CONCRETE CURING COMPOUND

X-Crete 800Cure: is a water-based chemical bonding compound that provides the most environmentally-responsible system for curing and hardening new concrete surfaces. Meets or exceeds ASTM specification C-308, C-309, and AASHTO 148 Type I. On fresh concrete it restricts the hydration of water assuring that it reaches maximum hardness.
